

123Scan Suite for Healthcare

Smoother scanning. Smarter healthcare. One suite.

Set up and maintain scanners faster

Running a healthcare practice is demanding. You deserve simple setup and maintenance no matter how tech-savvy your team. Zebra's 123Scan Suite for Healthcare delivers.

Easier tracking and more reliable performance give you more time to focus on patients and their outcomes. Configure scanners, automate workflows, and improve scanning accuracy across your facility using the suite of smart tools that comes standard with every Zebra healthcare scanner.

Value only Zebra delivers

Setup Tools

Easily configure and update your scanners with just a few clicks.

Blood Bag Parse+

Scan up to seven blood bag barcodes at once and extract only the data you need in a single trigger pull.

UDI Scan+

Improve operating room billing and traceability with UDI data capture that's sorted into the right fields, automatically.

DataWedge

Use a single scanner across multiple workflows and applications—no device switching needed.

Virtual Tether

Keep track of cordless scanners to prevent loss and lower your device replenishment budget.

IoT Connector

Bring fleet-wide scanner data into one console to make real-time, data driven decisions.

Real-time alerts

Maintain 99.9% device uptime with AI-powered asset management.

Remote Management

Push updates across your fleet without having to disconnect from your EMR or slow down your team.

Preferred Symbol

Automatically detect and capture just the barcode you need while excluding the rest.

PowerPrecision+

Maximize scanner uptime with real-time visibility into battery health and performance.

GSI Digital Link standard

As 1D UPC barcodes are phased out, GS1 is migrating to 2D Digital Link barcodes, which carry expanded data like expiration dates, batch numbers, and lot details.

Supported operating systems

Leverage off-the-shelf healthcare applications for Windows, Linux, Citrix, and VMWare.

Designed for healthcare workers who need it done now

Speed up workflows and cut down on errors with 123Scan's automation

Capture up to seven blood bag barcodes in one scan with Blood Bag Parse+, and handle multiple tasks with a single scanner thanks to DataWedge. You'll also get more accurate billing and implant tracking because UDI Scan+ puts data in the right fields automatically.

When scanning is seamless, care can come first.

Simplify scanner setup and keep every device ready

Whether you have 5 or 5,000 scanners, Zebra setup software tools get you up and running fast.

Your IT team can push updates, monitor performance, and generate reports without slowing anyone down by using remote management software. Catch issues before they happen with PowerPrecision+ battery health monitoring, so your team stays productive, and your scanners stay online.

Keep costs down and work flowing

Protect your bottom line. Find and use the scanners you have instead of spending money to replace missing equipment—Virtual Tether sends an alert when a scanner leaves its workstation. And you don't have to buy multiple devices, because DataWedge lets one scanner handle multiple tasks at a single station.

IT can catch issues early and respond fast to keep devices online using IoT Connector and remote management. But you won't need IT to set it up for you, because anyone on your team can do that quickly using 123Scan's staging wizard.

Keep healthcare moving

Keep up in a workplace that never slows down. Set up, manage, and optimize your scanners easier with Zebra DNA for Scanners. And, you'll know what's happening with your devices and keep them working longer thanks to the 123Scan for Healthcare suite.
