Device Guardian Product Descriptions

FINAL PP#1 11/12/18

Short

Your Zebra Android mobile devices are an important part of your business strategy — every time a device is misplaced, it impacts workforce productivity and your return on investment. Now, Device Guardian makes it easy to track and find all your lost and misplaced Zebra Android devices. It's easy to deploy. It utilizes your existing Wi-Fi network to track connected devices. There's nothing to buy — no additional infrastructure or licenses are required. The results? Maximum device availability. Maximum return on investment. And maximum workforce productivity.

Medium

Every day, your Zebra Android mobile devices help streamline processes and better serve your customers. So whenever a device is misplaced, it impacts workforce productivity, customer service levels and your return on investment. Now, with Device Guardian, you can easily track and find all your lost and misplaced Zebra Android mobile devices. Device Guardian is easy to deploy. Just download and install the Device Guardian application on any server in your corporate network and the Device Guardian Client on all the Zebra Android devices you want to track — Device Guardian does the rest. It utilizes your existing Wi-Fi network, so there's no additional infrastructure to buy. There's no cost for the software — it's part of your Zebra OneCare Support contract. With the always-available Web-based dashboard, you can see device name, the access point the device is currently connected to, the battery charge level, when the device last reported to Device Guardian and any associated alerts. When you need to find a device, just click to turn any supported Zebra Android mobile device into a Geiger-counter that makes it easy. The result? Maximum device availability. Maximum return on investment. And maximum workforce productivity.

Long

Every day, your Zebra Android mobile devices help streamline processes and better serve your customers. So whenever a device is misplaced, it impacts workforce productivity, customer service levels and your return on investment. Now, with Device Guardian, you can easily track and find all your lost and misplaced Zebra Android mobile devices. Device Guardian is easy to deploy. Just download and install the Device Guardian application on any server in your corporate network and the Device Guardian Client on all the Zebra Android devices you want to track — Device Guardian does the rest.

Since Device Guardian utilizes your existing Wi-Fi network, there's no additional infrastructure to

buy. There's no cost for the software — it's part of your Zebra OneCare Support contract. With the always-available Web-based dashboard, the information you need to locate devices and maintain device visibility is always at your fingertips — from the device name, the access point the device is currently connected to, the battery charge level, when the device last reported to Device Guardian to any associated alerts. Alerts can be triggered when devices have not reported into Device Guardian in the amount of time you have specified, or when the battery level dips below your defined threshold.

When you want to find a device, a single click in the dashboard generates and sends a work order to Zebra Android mobile devices running the Device Guardian Client application. Finding the missing device is easy with the help of a Geiger-counter like function with a graphic display that indicates how far away you are from the device, and whether you are moving closer or farther away. You can even make the device ring to easily find devices that may be hidden from view.

The result? Maximum device availability. Maximum device value. Maximum return on investment. And maximum workforce productivity.
