

Modernize law enforcement with Workstation Connect

Power law enforcement workflows with a single device

Law enforcement staff often manage various technology solutions, including MDTs/MCTs, desktop computers, and handheld devices in their daily operations. This setup presents opportunities for improvement in:

Cost efficiency

- Consolidating devices into a single, cost-effective purchase
- Simplifying hardware maintenance
- Streamlining application support to one device

Process optimization

- Reducing training time for staff
- Facilitating seamless transitions between the field and station/office
- Minimizing potential downtime with centralized IT support

Workstation Connect is your ultimate mobility solution

**Get simultaneous dual functionality
that delivers outstanding value**

- Instantly create a mobile driven workstation to access all the apps on the Zebra mobile device and more on a large screen with a desktop style interface
- Continue to use all the apps on the Zebra mobile device while cradled
- Work on different applications on the mobile device and desktop simultaneously

What if you could consolidate all your devices into one that can do it all?

Zebra Workstation Connect enables Law Enforcement staff to use a single device that can serve as a "host" that meets the needs of MDTs/MCTs, desktop and handheld devices, eliminating the need for multiple computing devices, resulting in reduced costs and increased efficiencies.

Here's how it works:

1. Rugged mobile computers

Zebra's rugged mobile computers that support Workstation Connect, allowing you to select the right form factor, the right level of ruggedness, the right features, and the right wireless connections for different users and departments — as well as create workstations with the Zebra devices you already own.

2. Connect cradles for workstations

Connect Cradles provide all the connections required to turn Zebra compatible rugged mobile computers into fully featured workstations, including:

- **HDMI** to support a high-resolution external monitor
- **Ethernet** for wired network connectivity
- **3.5 mm jack (model dependent)** for wired headsets to support voice apps
- **Four (4) USB-A ports** to connect a keyboard, mouse, printer, scanner and more
- **Cable management** for easy installation of peripherals in an organized way
- **Optional cable cover** secures connections and prevents unauthorized access to open ports

3. Workstation Connect software

This advanced software enables law enforcement personnel to simply dock their Zebra rugged mobile computers into a Connect Cradle to create fully-featured workstations.

4. Add security with USB host manager software

Prevent the connection of unauthorized devices: The USB Host Manager software polices the peripherals that are attached to a Connect Cradle or Connect Hub, ensuring that only approved peripherals are connected.

Experience the benefits of Workstation Connect

Optimize your operations with simplified workflows communications

Now one device does it all — personnel no longer need to switch devices for different types of tasks.

Cut energy use by more than 50%*

A Workstation Connect mobile-driven workstation uses less than half the energy as a desktop computer.

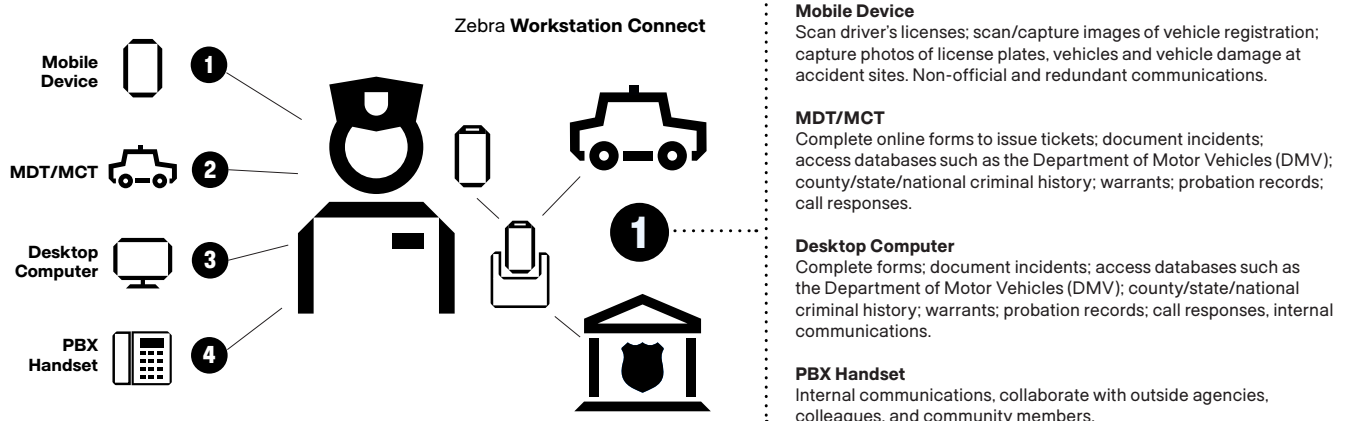

Simplified infrastructure

Eliminate the need to purchase and manage MDTs/MCTs and Desktop computers.

Increase device ROI

Do more with the devices you invest in.

Law Enforcement officers need to access different information systems INSIDE and OUTSIDE the vehicle and station. ONE Zebra mobile device with Workstation Connect does it all. A single mobile device with a Workstation Connect in-vehicle and in-station cradle consolidates four systems in one.
