

Printer Profile Manager Enterprise

Robust Remote Management for Zebra Printers

Managing your printers can be time-consuming and costly. They are likely located throughout your campus and could span multiple facilities, towns or even the country. Sometimes they're in patient areas, creating delays while technicians wait for those spaces to clear before getting to work. As a result, simple configurations, updates, security settings and even troubleshooting can take days or even weeks. Save time and manage all your Link-OS™ printers across your locations remotely with Zebra's Printer Profile Manager Enterprise (PPME). You get the most fully-featured remote printer management solution in its class, with convenient browser-based anywhere, anytime printer management. Minimize management time and cost and maximize uptime for your printers with PPME, only from Zebra.

Anywhere, anytime browser-based printer management

Access PPME from virtually any device with a browser, including a laptop, desktop or tablet.

Easy to install

Setup is fast and easy with the integrated self-installer.

Scheduled discovery

Discover all your networked Link-OS printers quickly—no need to physically locate printers at different sites. Spend more time on other tasks by scheduling repeat discoveries to find new printers on your network and auto connect them to PPME.

Create printer groups for greater management simplicity

Quickly and easily organize printers with tag names you create to sort your printers into logical groups, taking management simplicity to the next level. With the press of a button you can configure, update or check the status of individual printers, groups of printers or all your printers, giving you the flexibility to customize by department, location or more.

Create and store printer profiles

Create and save a library of profiles that can be distributed to printers at any time.

Simple 'Click-to-Configure'

No matter how complex your configuration needs may be, we've made it easy. More than 300 settings are logically grouped into categories and accessible via tabs, allowing you to quickly and easily locate the settings you want with just a click or two for fast, easy configuration.

Choose when to update

Schedule updates as soon as the printers are powered up and visible on the network, or pick a time and date to minimize disruption.

Maximize printer uptime with instant, at-a-glance printer status

It's easy to see that status of your printers in real time, no matter how many you have or where they are located. Use the web-based dashboard with intuitive red, yellow and green visual alerts to quickly identify and triage issues to maximize uptime and keep your caregivers productive. Red errors signify printers in need of immediate attention, with a text label identifying basic issues such as battery health or an open printer head. Yellow indicates a warning or pending issue in need of attention, with text labels identifying the issue such as a paused printer or one that is out of the operating temperature range. And, green signifies a healthy online printer.

Built-in security

A direct, secure, encrypted connection between PPME and printers protects sensitive data to help ensure compliance with standard security best practices.

Easily manage important label objects

The integrated font and graphics converter makes it easy to manage label template objects, such as fonts and graphics, optimizing print times.

Multiple user roles for granular control over permissions

Permissions allow you to control user access to specific features in PPME. Create your own roles with permissions or use one of the built-in administrator, technician or other user roles. Assign the appropriate role to your users so they have access to only the features they need.

Support for IPv6

Printer Profile Manager Enterprise version 4.3 and later supports printer connections and printer network configuration for both IPv4 and IPv6 addressing schemes.

Printer Profile Manager Enterprise specifications

Requirements

Compatible printers	ZT2 Series, ZT4 Series, ZT5 Series, ZT6 Series, ZD4 Series, ZD510-HC, ZD6 Series, ZQ3 Series, ZQ5 Series, ZQ6 Series, ZC100, ZC3 Series, ZE5 Series, QLn Series, iMZ Series, ZR Series Zebra Link-OS Basic printers are not compatible with Printer Profile Manager Enterprise
Processor	8 core 64-bit processor
RAM	Minimum of 32 GB
Drive space	Minimum 100 GB free drive space
Supported servers	Windows Server 2019 Windows Server 2022 Windows Server 2025
Supported browsers	Google Chrome and Microsoft Edge

For optimum print quality and printer performance, use Certified Zebra supplies.
Specifications subject to change without notice.

Minimize management time and cost and maximize uptime for your printers.
