

Your operations deserve the best tools

Upgrading your printers protects
your business

Many businesses still rely on printers that have reached end of support. No firmware updates. No security patches. No guaranteed access to parts. That may seem manageable until something happens. Outdated printers expose your operations to security vulnerabilities, unexpected downtime, and growing maintenance costs. The good news? Zebra has the tools and resources to help you upgrade your fleet easily with benefits that start right away.

Outdated printers cause:

Unexpected downtime

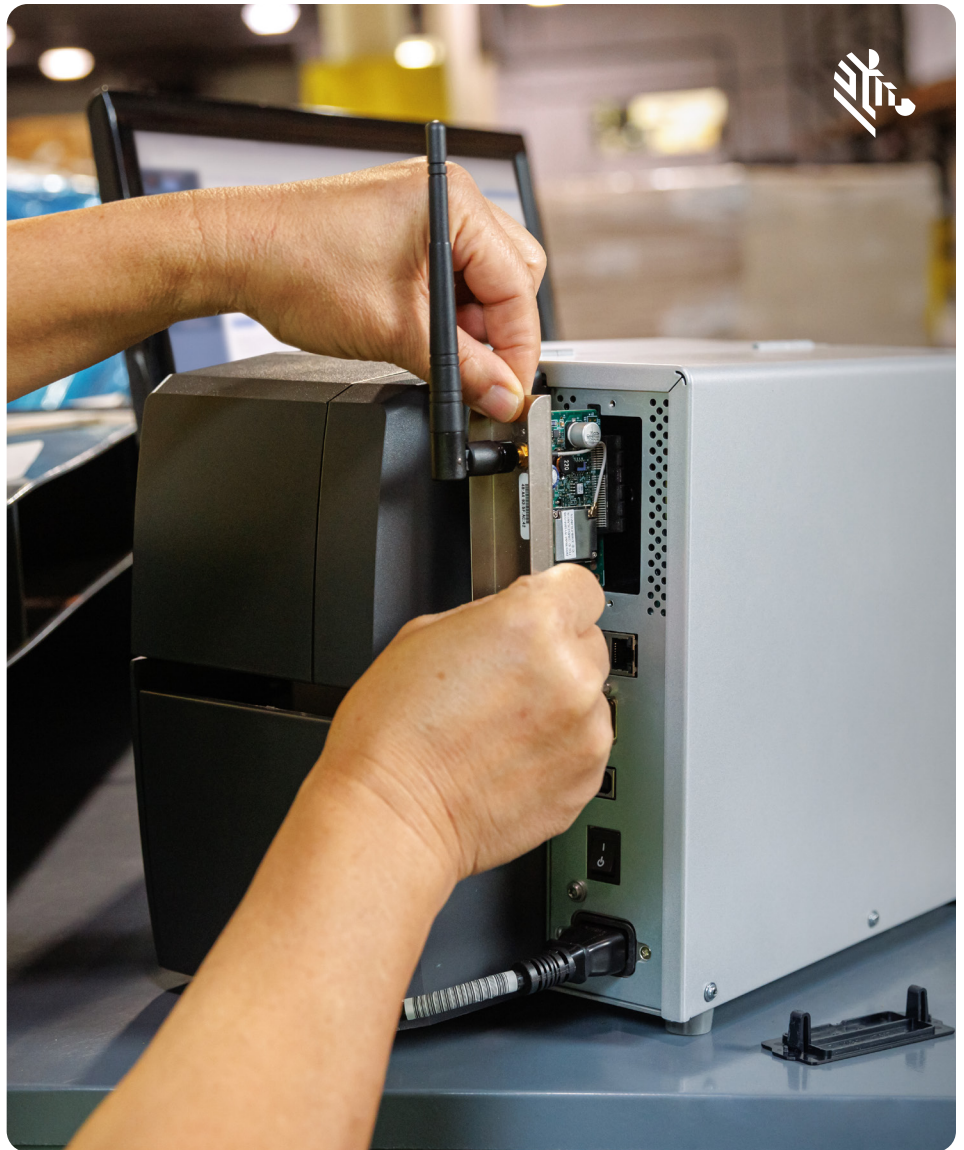

Security risks

Costly replacements

Security and reliability are possible with supported devices

Outdated printers put both at risk

Security: Close the door to vulnerabilities

Security is a top priority when upgrading your printer fleet.

Printers are also network endpoints. Leaving them unsupported means leaving the door open to attackers. Financial losses, legal consequences, and reputational damage can follow a single breach.

Keeping your printers updated with integrated security, built into every device from day one, is the smarter path forward.

Operational reliability: Start preventing

Older devices with outdated operating systems are more susceptible to disruptions and extended downtime.

Get peace of mind and improve productivity by choosing new devices that can be continuously updated with bug fixes and patches. Plus, resolve issues quickly with remote management abilities that give you instant alerts anywhere.

\$4.4 million

average cost of a
single data breach
in 2025

Institute, [2025 Data Breach Study](#)

The value of keeping your technology updated

Much better results at lower long-term cost

Get parts and support when you need them

When outdated printers reach end of service, replacement parts become scarce or simply impossible to find. Upgrading your fleet to a supported Zebra model gives you guaranteed access to parts, accessories, and a global support network built to help ensure your long-term success.

Work smarter, enhance performance, and increase productivity

Current Zebra printers are faster, more connected, and easier to manage than the previous models. With improvements in wireless connectivity, print speed, and fleet management, all supported by the Zebra DNA suite, teams spend less time troubleshooting and more time on the work that matters.

Do the math to reduce your total cost of ownership

The cost of maintaining outdated hardware adds up fast—emergency repairs, expedited parts, productivity loss, increased IT involvement. Investing in a new, supported Zebra printer reduces these costs significantly over time. Add ongoing firmware updates, a full warranty, and a compatible ecosystem of supplies and accessories, and your return on investment (ROI) becomes clear.

Ready to upgrade?

Take the next step. We'll help you get there.

Our technology never stops improving to help your business be better every day. That's why we make your upgrading easier and more affordable than you might expect. Through our global network, we offer programs across multiple regions to help offset the cost of moving to a newer, fully supported Zebra model. Contact your Zebra sales representative today to find the right upgrade path for you.

Below is a [list of end-of-service SKUs](#) and their recommended printer upgrade model. You can verify if your SKU is included in the list.
