

THE BEST ENTERPRISE MOBILITY EXPERIENCE: ZEBRA SOLUTIONS AND SOTI MOBICONTROL

Zebra Technologies and SOTI continue to enjoy a successful partnership and the relationship has never been stronger. The synergy that exists between the teams has allowed for the development of unique solutions that combines SOTI MobiControl with both Zebra Mobility DNA and Zebra Print DNA. The tight integration between the various components offers the best possible user experience in a way that maximizes productivity, achieves efficiencies and simplifies work flows.

HERE ARE THE TOP 5 REASONS FOR ENABLING A JOINT ZEBRA-SOTI ENTERPRISE MOBILITY SOLUTION:

1. STAGENOW INTEGRATION

Among the various device configuration options that StageNow provides, it also allows the ability to create a QR code for quick device enrollment into MobiControl. In other words, setting up a device to be managed and configured with MobiControl can simply be done by scanning a QR code. This functionality is available right out of the box and is fully compliant with the latest Android Enterprise technology.

2. LIFEGUARD OS UPDATE MANAGEMENT

LifeGuard was developed to ensure adequate lifecycle of the modern mobile device. As the Android operating system continues to evolve and older versions are deprecated, LifeGuard steps in to provide the security updates required to keep the device secure. SOTI MobiControl's close integration with Zebra allows it to pull LifeGuard version information from devices and gives device administrators control over when updates are installed.

3. MOBILITY EXTENSIONS (MX)

Granular device configurations offered via Zebra Mobility Extensions (Mx) can easily be pushed remotely via SOTI MobiControl. The list of configuration options is quite extensive and ranges from defining an APN connection to setting the display timeout value. MobiControl provides the means to deploy these configurations to devices in the field with minimal effort.

4. SUPPORT FOR LATEST HARDWARE

Even before new Zebra products are released, SOTI and Zebra Mobile Device Management (MDM) engineering teams work relentlessly together to ensure that these can be properly managed via SOTI MobiControl. Considering the evolving mobile landscape, the necessary components are quickly updated to maintain the correct and necessary interoperability. As a result, SOTI MobiControl is able to support all of the latest Zebra mobile devices. SOTI continues to support Zebra's latest mobility products including TC52, TC57, TC72, TC77, and PS20.

5. LINK-OS PRINTER SUPPORT

MobiControl offers the ability to manage and configure Zebra Link-OS compatible printers, including the latest ZQ600 series printers. Not only can you configure things like power and printer label settings, but it can also provide access to key utilization metrics and insights. When managing mobile computers and printers, MobiControl provides a single pane of glass for superior mobile device management.
