

Take command of the on-demand economy

Upgrade warehouses to the MC9300

Equip warehouses to handle the volume and velocity of e-commerce. Move them from outdated Windows CE to Zebra's modern Android™ devices, like the productivity-boosting MC9300.

Why Zebra's MC9300 is good for business—yours and your customers

Upsell 3 million current customers: Millions of workers already use an MC9000 Series mobile computer. Selling them on the next evolution of their favorite device just makes sense for them— and dollars for you.

Speed up their training times: Help warehouses onboard in weeks instead of months, using an operating system new hires already know, Android. Support terminal emulation (TE) apps today with a keypad and intuitive apps tomorrow with a touch screen. The MC9300 is equipped with both.

Solve one of their biggest worries: Ease their transition to Android with Mobility DNA's All-Touch TE. Your customers can run their existing TE apps right out of the box without having to code their backend systems.

Gain residual income: Your customers will value Zebra OneCare's years of extended security support for their OS and responsive service for their MC9300. You'll value the monthly subscription-based revenue it generates.

Future-proof your sales: The Android device you sell customers today can run the operating systems of tomorrow. Its Qualcomm chipset creates a multi-task platform ideal for data and voice apps, machine learning and advanced IoT applications.

See how to grasp more sales with MC9300.
