

Help Warehouses Solve Dock-to-Stock Setbacks

Migrate them to Zebra's modern VC80x

Turn warehouse challenges into sales opportunities. Customers risk making errors and wasting resources by using outdated vehicle-mounted computers. Displays are hard to see and difficult to mount for line-of-sight efficiency. Add to that, processors are sluggish, and hardware fails in harsh conditions. Transition them to the smarter, faster, better solution—Zebra's VC80x— to put productivity into high gear.

Here's how you can cash in on Zebra's VC80x:

Offer on-the-go connectivity: Vehicle operators need constant connectivity to WMS and team members. They have it with the only device in its class to offer triple throughput via 802.11ac, the fast roaming capabilities of 802.11r and support for Workforce Connect Push-to-Talk Pro and Bluetooth® voice directed apps.

Let them handle more: A loud front-facing speaker for scanning feedback in the noisiest of warehouses. An ultra-bright display for sun-washed loading bays. A touch screen sensitive to the thickest of gloves. Every feature and interface of the VC80x is designed to allow vehicle drivers to minimize effort and maximize time.

Go to extremes for your customers: Give customers the mobile computer engineered for the harshest environments, including cold supply chains. The VC80x is the only Android vehicle computer to deliver true frost and condensation free operation, thanks to heaters for its touch-screen, connectors, board and batteries.

Multiply your profits with multiple mounting options: Offer your customers the choice of quick-release, RAM, VESA, keyboard and scanner mounts. All mounts combine with a compact size for an easy fit and easy mounting, even in the smallest warehouse vehicle. Plus, the VC80x's adapters are designed with backward compatibility to legacy mounting hardware.

Solve one of their biggest worries: Ease their transition to Android™ with Mobility DNA's All-Touch TE. Your customers can run their existing TE apps right out of the box without having to code their backend systems. And when they're ready to modernize their apps, All-Touch TE simplifies the process.

Cross sell a complete solution to increase your revenue: Bundle the VC80x with a 3600 rugged barcode scanner or an RS6000 ring scanner for higher productivity and revenue. Zebra cordless scanners can instantly be paired with the VC80x via a barcode.

Drive efficiency and sales with Zebra's VC80x.
