

Device analytics and administration made simple

One package, two tools, and all the features you need for easy, remote device visibility and administration

Get the control you need to minimize management time and cost and maximize device uptime with Zebra DNA Cloud and VisibilityIQ™ Foresight — a powerful duo of ‘made-for-Zebra, by-Zebra’ solutions. Now you can do it all, without ever touching your devices. Zebra DNA Cloud harnesses the functionality of our Mobility DNA portfolio by providing a single, intuitively organized interface for a more cohesive and unified user experience. Zebra DNA Cloud provides access to solutions that help deploy, manage, secure, support and optimize every stage of your device’s lifecycle. Once your devices are up and running at peak performance, keep them that way with VisibilityIQ Foresight. This powerful cloud-based solution analyzes a wealth of metrics from your devices to provide the predictive intelligence needed to anticipate and address device issues — before they result in device downtime and reduced workforce productivity.

Full lifecycle support

Whether you need to prep new devices for deployment, install new or updated applications, configure device settings and policies, protect devices against the latest security threats, address device issues or optimize the user and tech support experience, you can do it all with the Zebra DNA Cloud and VisibilityIQ power package.

Zebra DNA Cloud/VisibilityIQ Power Package		
	Features	Benefit
Deployment Simple out of box staging and initial device setup	Initial Device Setup and Cloud Enrollment	Out of box staging and initial device setup.
Configuration Easy over the air configuration of device settings and policies	Device Settings	Deliver device settings and configurations over the air.
Application Management Install, configure and monitor usage of critical enterprise applications	Install	Install Zebra and 3rd party applications over the air.
	Configure	Configure Zebra and 3rd party applications over the air — including both App Config and Configuration files.
	Update/Versioning	Update your applications over the air.
	Usage Analytics	Understand the health and utilization of your devices to better understand and optimize your operational workflows.
	Issue Debugging	Get the insights required to address Application Not Responding (ANR) issues.
Security Ensure devices have the latest features, are protected against the growing number of threats, keep workers efficient, and prevent abuse by limiting access	Secure Setting Configuration	Deliver security configurations over the air (OTA), such as block reset and disable features.
	KIOSK Mode	Control access to apps, prevent changes to settings and customize the user experience.
	Android Updates and Analytics	Easily view available software updates and determine if your devices need an upgrade. Deliver Android updates (Lifeguard™ for Android™) over the air, with controls to manage how and when the updates are delivered.
Optimize More intelligence to drive more device value and workforce productivity	Customized Keyboard	Provides easier input on the type of data your workers collect, with more controls for an optimized user experience.
	Secure Browser	Get everything needed to quickly build device apps for barcode scanning, signature capture, payment processing and printing (additional cost) with this secure Industrial Browser.
	Battery Management	View battery health, performance and utilization. Know when to replace unhealthy batteries that can no longer hold a full charge before they affect user productivity.
	Device Inventory	View historical analysis by location and device state.
	Device Location	See where all devices are located — inside your facility and out in the field.
	Device Utilization	Intelligently analyze your mobile computer, printer and scanner utilization — how and when you need it.
	Scanning Trends	Understand the frequency and success rate of scan attempts across all devices, times and locations.
	WLAN Signal Strength	Provides access point and device signal strength analytics.
	Memory Utilization	See physical and storage memory, complete with alerts when usage is high.
	Device Reboots	View historical analysis of user system reboots by site.
Support Expedite on device and remote support of mobile users and applications; visibility into support and repair lifecycle	Remote Control	Enable remote screen sharing and interaction for quick issue resolution.
	End-user Support Tools	Enables mobile users to check device functionality and health, directly on the device.
	Administrative Support Tools	On-device support tools enable administrators to extract detailed troubleshooting information from Android and wireless radios.
	Service Contracts	View current contracts and renewal alerts.
	Support Cases	Provides analysis of support cases and lifecycle status.
	Repair Cases	Create repair cases and view analysis of repair cases, lifecycle status and top issues.
